## Survey Data Analysis

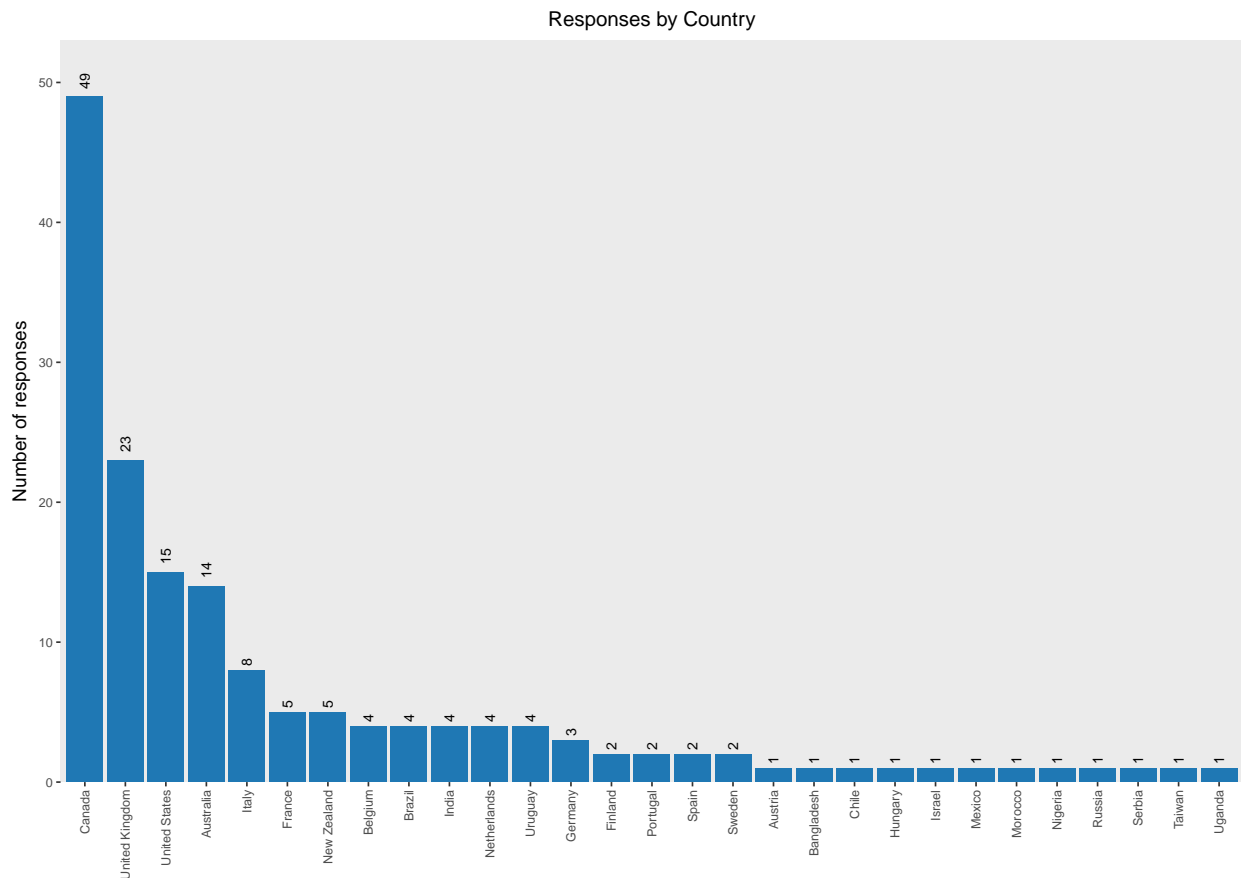

**Note that numbers not all the same because respondents did not always answer every question**

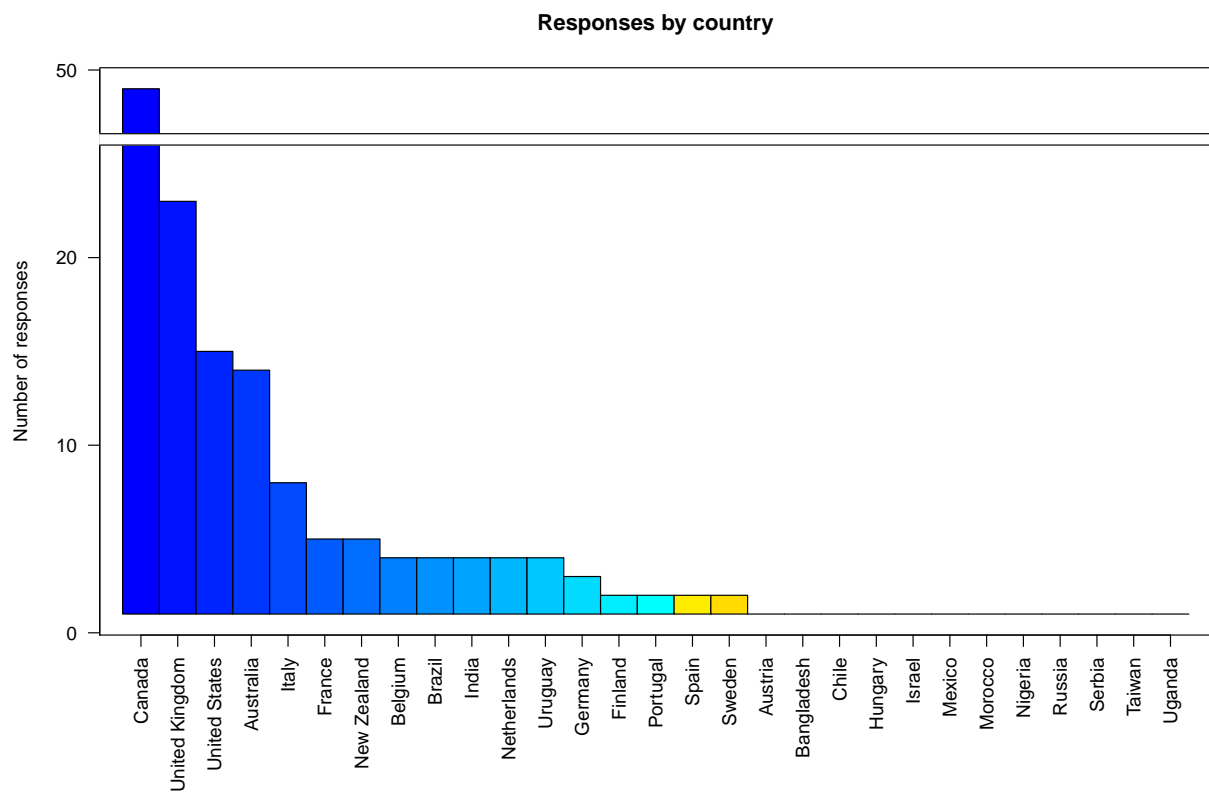

### Results

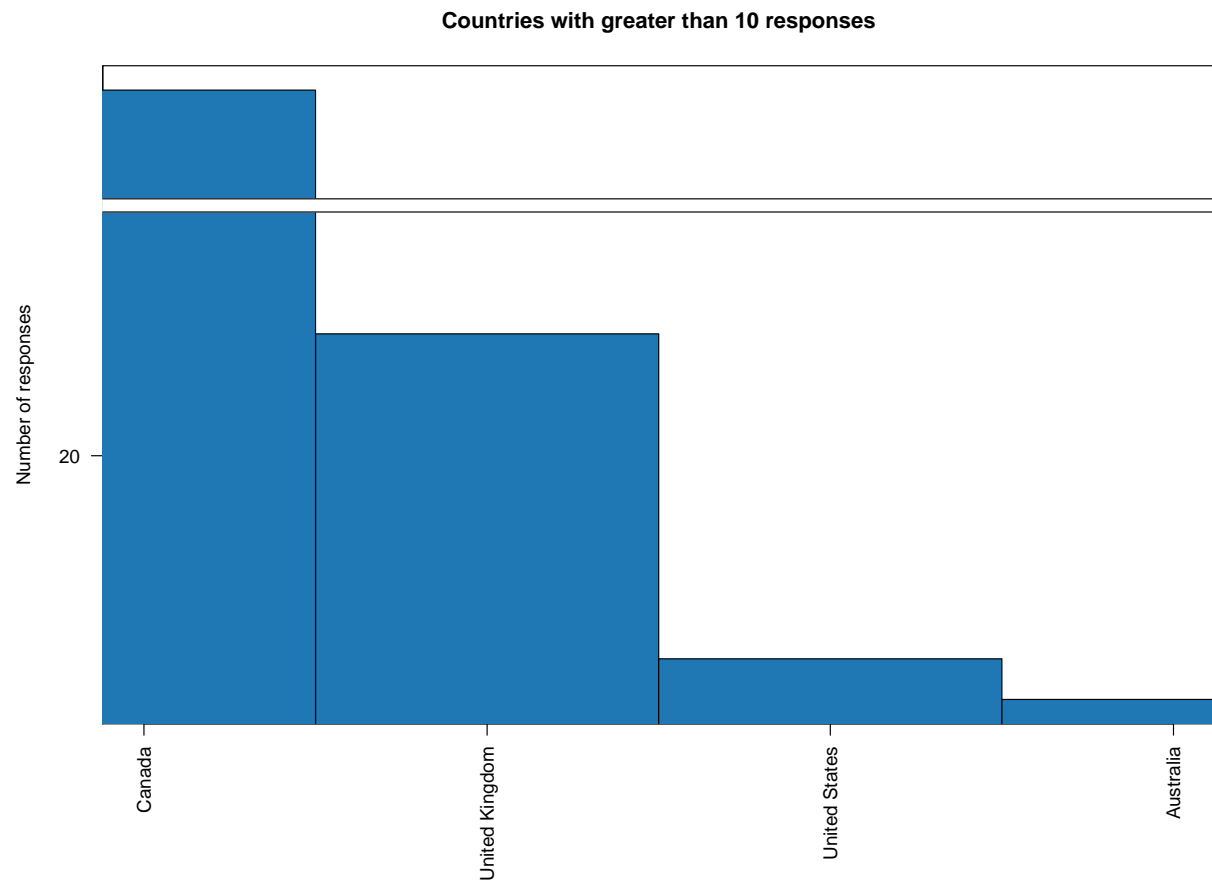

In total, 162 researchers completed the online survey. Of these, almost xxxxx were male (53%) and xxxxx were female (48%); xxxx proportion either did not input their gender or selected other. This category only includes the responses from researchers who are currently in their PhD or are RAs.

Researchers from many different disciplines were represented in the survey. 56 percent of responses came from either the natural or physical sciences (Figure 4.2). The remaining responses were spread amongst the medical and life sciences (14%), engineering (4%), interdisciplinary research (8%), and social sciences and humanities (17%).

**Figures of number of responses by country (these are also saved as individual PDFs)**

Countries with 10 or fewer responses
