Survey Data Analysis

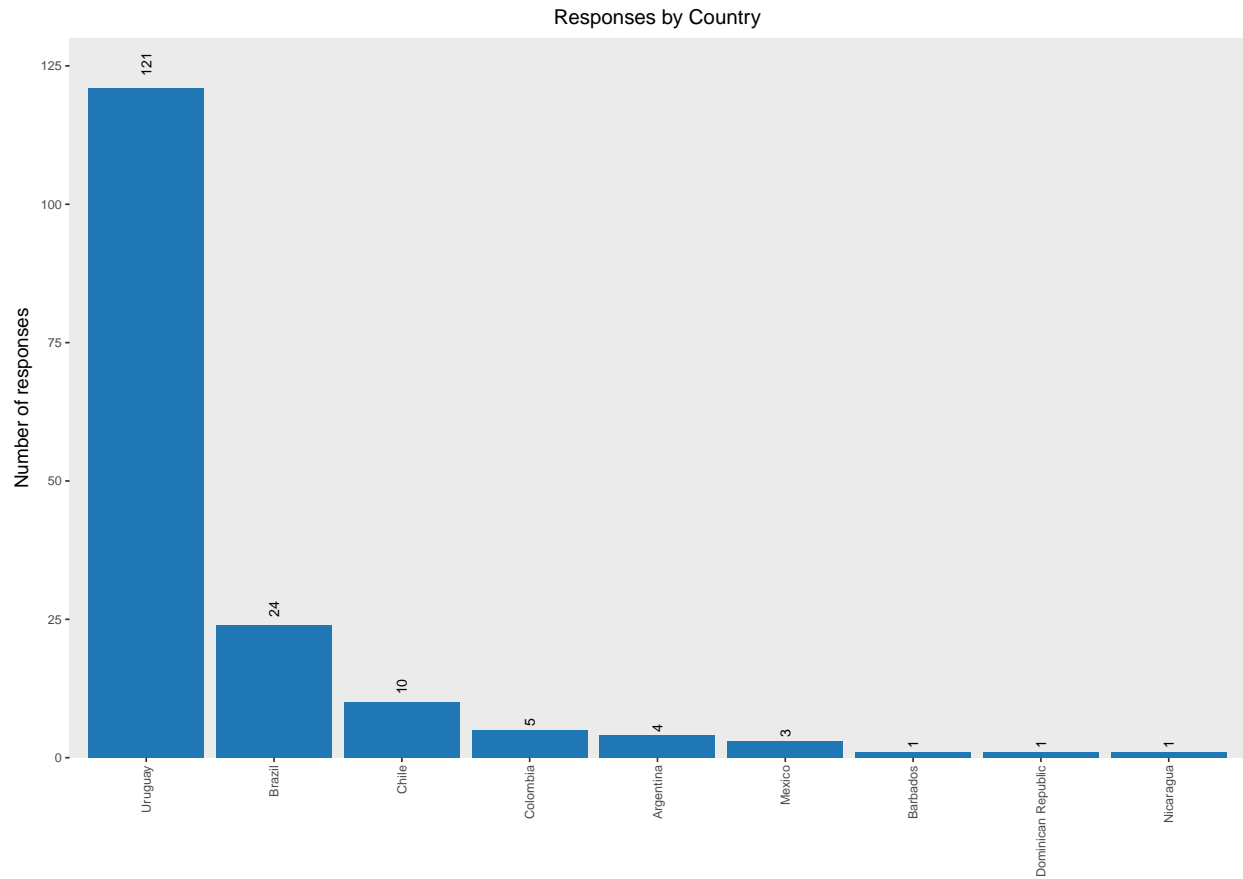

Note that numbers not all the same because respondents did not always answer every question

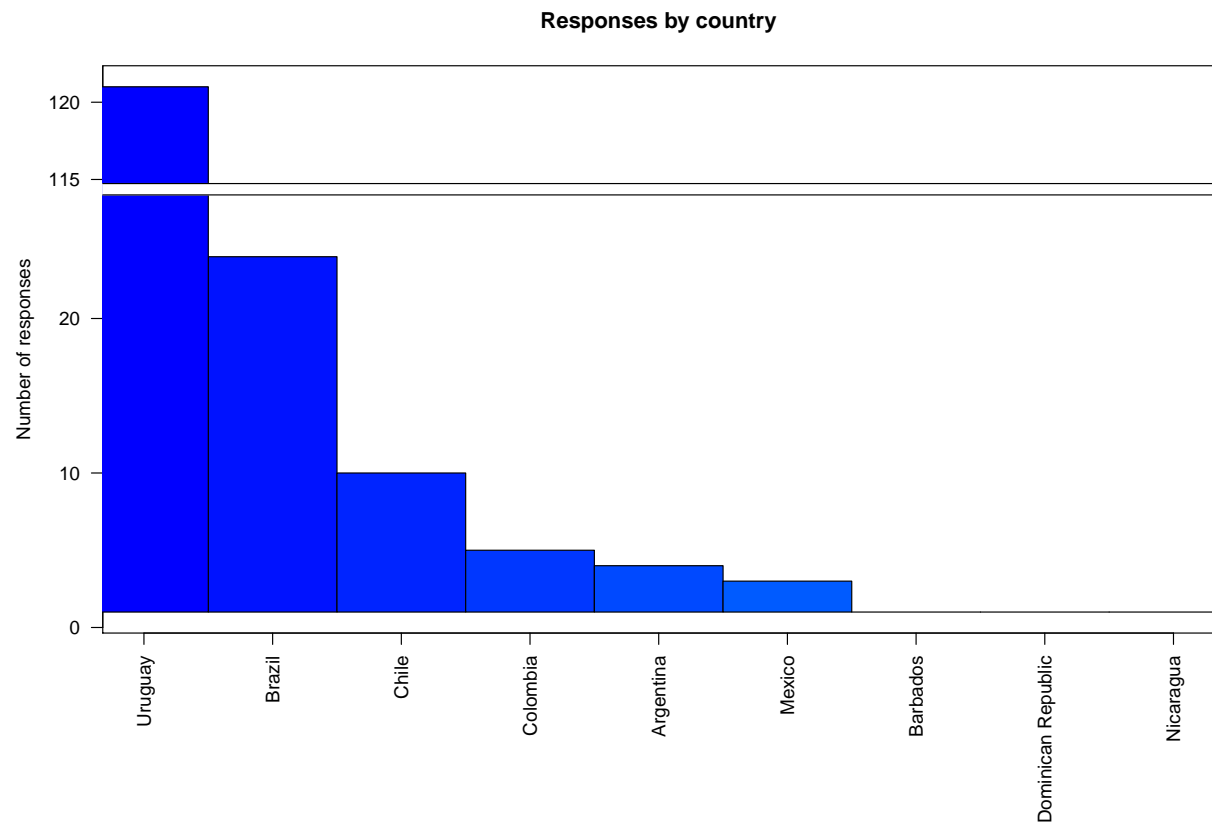

Results

In total, 170 researchers completed the online survey. Of these, almost xxxxx were male (66%) and xxxxx were female (34%); xxxx proportion either did not input their gender or selected other. xxxx of the survey respondents (92%) were either senior academics (58%), defined as those researchers with more than ten years experience applying for research grants since completion of their PhD, or early career academics (34%) (Figure 4.1). xxxxx also came from post-doctoral researchers (6%), non-academic researchers (1%), or those who did not indicate their career stage (0.6%).

Researchers from many different disciplines were represented in the survey. 66 percent of responses came from either the natural or physical sciences (Figure 4.2). The remaining responses were spread amongst the medical and life sciences (23%), engineering (4%), interdisciplinary research (5%), and social sciences and humanities (0%).

Figures of number of responses by country (these are also saved as individual PDFs)

Countries with greater than 10 responses
